

Generators

- HUSH DUCT™ silencer banks for inlet air and cooling fan discharge
- Pressure loss maximum 0.50" w.g. for inlet and discharge silencing
- Keep dampers away from the face of silencer banks
- Specify engine exhaust muffler for performance consistent with cooling air silencers
- Radiator cooling fan must be flexed to the exhaust silencer to prevent short cycling conditions
- Turnkey enclosures are available for generators installed outside MERs.
