

HUSHCORE™ *Ultimate*™ System **Installation Guidelines**

HUSHCORE™ *Ultimate*™ Systems are highly customized high performance designs that do not follow a consistent boiler plate installation process. Detailed fabrication drawings for each *Ultimate*™ System will outline structural steel anchorage and tie in requirements, panel layouts and support methodologies, and erection needs of auxiliary components such as acoustical louvers and silencers used on the project.

Installation of high performance HUSHCORE™ *Ultimate*™ Systems may require attention to detail beyond the skill sets of typical mechanical installation trades. For this reason, many *Ultimate*™ System designs are specified to be installed by the acoustical manufacturer.

Caulking and flashing work cannot be fully detailed and are the responsibility of the installer such that the final completed installation is as close to air tight as possible.

Turnkey installation eliminates performance disconnects during post installation commissioning.
